

MICRODUCT

The speed-pipe® ground are directly buried and assure highest flexibility when constructing fibre optic networks.

MICRODUCT

The complete microduct system includes an extensive range of micro ducts , sealing elements and fittings. These products consist of durable materials, which can individually be combined and extended if necessary.

Microducts for subducting and direct burying

High-end quality for modern fiber optic networks.

This solution facilitates a flexible, cost saving and maximum utilisation of capacity of empty and occupied ducts.

The directly buried solution assure highest flexibility when constructing fiber optic networks.

Bundles and flat multi microduct for subducting and direct burying

Available several configurations, different microduct size of multi microduct for subducting and direct burying.

Microduct Accessories

Available all accessories in order to support microduct infrastructures as : sealing and fixing elements , connecting elements, branch supports, protective elements, manhole insertions, tools, cellar elements, sleeves.

MICRODUCT

Permanent connectors

Permanent reducers

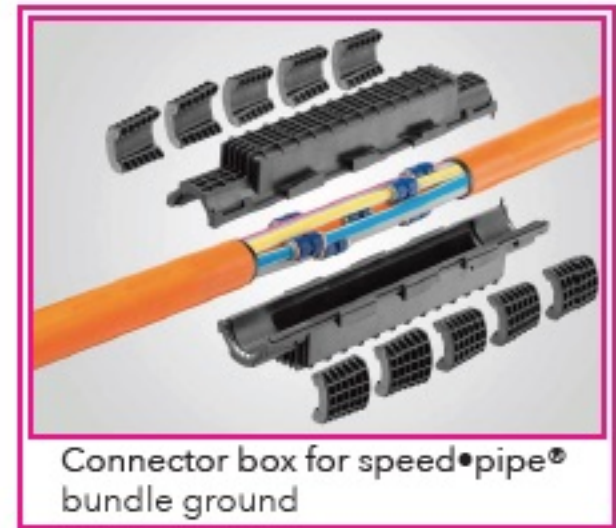

Divisible connector with gas-stop

Permanent end plugs

Divisible connector

Connector box for speed•pipe® bundle ground

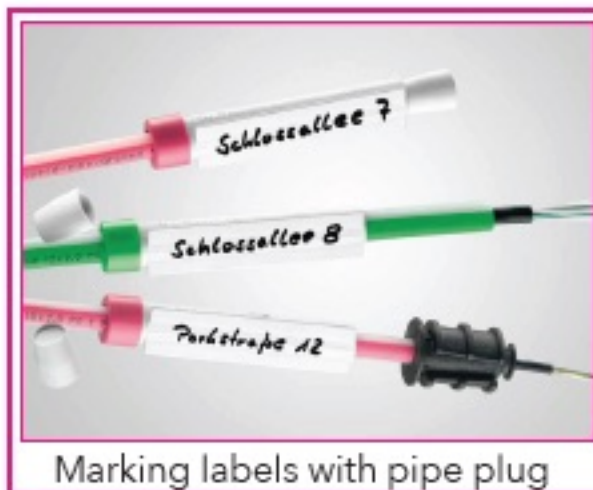

Set of sealing element with protective bend 28 / 7

Cable duct 110 occupied with one speed•pipe® bundle and one cable

Divisible sealing element

Marking labels with pipe plug

Split duct branch 50 / 50 - 30°
